Directions:

- The small container needs to be large enough to set a bed couch leg inside.
- Glue the two containers together, the small one sitting in the larger
- Place masking tape around the outside of the larger container so
- that the bed bugs can easily climb up into the container. Sprinkle talcum powder into the "moat". This will keep the bed bugs from traveling.
- You can add some DE to injure the bed bugs in the moat. It will eventually kill them. (Diatomaceous Earth)
- Make sure you have enough interceptors for legs of every bed, couch and plush chair.
- Check and clean the interceptors every 1-2 weeks Clean and reapply talc periodically to keep the interior surfaces smooth.
