

Parents and Caregivers of Teens: *It's Important to Safely Dispose of Opioids*

FDA

Help keep your family and community safe, starting in your home—get rid of any unused or expired prescription opioids that may be hiding in cabinets, drawers, or anywhere else you store medicine. Remove these medicines as soon as possible to reduce the chance that your teen takes the opioids by accident or on purpose.

WHAT IS AN OPIOID?

Prescription opioids are powerful pain-reducing medicines that include oxycodone, hydrocodone, morphine, and others. Doctors prescribe opioids after surgeries and for injuries; however, these medicines can have serious risks if they are accidentally or intentionally misused.

WHY IS OPIOID DISPOSAL IMPORTANT FOR ME AND MY FAMILY?

Teens may take opioids that are not prescribed for them. Intentional misuse of prescription pain relievers by teens is an important public health issue, contributing to alarming rates of overdose and death.¹ Many people who misused prescription pain-reducing medicines said that they got their most recent pain reliever from a friend or relative.¹ Prevent potential misuse by restricting your teen's access to opioids.

HOW DO I SAFELY DISPOSE OF OPIOIDS?

Ask these questions to determine how to dispose of opioids:

1. Is a [medicine take-back option](#) readily available? If so, this is the preferred option.
2. If not, is the medicine on the FDA "[flush list](#)"? If it is, flush it down the toilet.
3. Otherwise, throw it away in the household trash, following the directions at www.FDA.gov/DrugDisposal.

For information about all three of these methods, visit www.FDA.gov/DrugDisposal.

Keeping unused opioids in the home creates a serious health risk, especially if teens live with or visit you.

Remember:

- ✓ Don't share your opioid prescription with others.
- ✓ Store opioids out of sight and out of reach of teens in your home.
- ✓ Dispose of unused opioids safely when there is no longer a medical need for them.
